

TOORAK RESIDENCE

Petersen D91 bricks add a dramatic effect to this award-winning house in Toorak

This beautifully appointed four bedroom home in Melbourne's Toorak, designed by Rob Mills Architects, left no stone unturned in its meticulous design and careful construction. Brimming with both custom made and hand crafted finishes, it's no surprise that Petersen bricks were chosen to adorn the external façade. And, true to Petersen style, they did so with dramatic effect.

Rob Mills Architects' choice of Petersen D91 hand made bricks all came down to aesthetics; they simply liked the look of the brick and knew they would perfectly complement the other external materials used, particularly the black detailing of the garage and the automated external louvres.

But perhaps the most outstanding external feature of the house is the street-facing, curved façade, which is guaranteed to stop passers by and turn heads because it is a fantastic sight to behold.

Excitingly for Visioneer Builders, this stunning house created a stir at the 2016 HIA-CSR Victorian Housing Awards, before many industry leaders and peers, winning accolades across three categories, including Home of the Year, Custom Built Home of the Year and Custom Built Home Over \$2million.
